

# \$WEEDSEED

Greenpoint Seeds' ecosystem token on Solana — how the rewards program works, what it is, and what it is not.

White paper, version 2.0 — September 2026. Supersedes all earlier descriptions of the program.

The ticker is a nickname. The address is the token. Only this mint is real:

EnYJU3UV7buAZV8SimWtKG4UwfJVZZwhHxhzCB2411G5

## In one paragraph

Greenpoint Seeds is a cannabis seed breeder and online store operating since 2014. \$WEEDSEED is its single ecosystem token: a fixed-supply Solana SPL token whose mint authority has been revoked, so nobody — including the company — can create more. The program behind it is simple and fully automatic: **ten percent of every paid order at greenpointseeds.com buys \$WEEDSEED on the open market and pays it out to eligible holders, in small rounds, as orders land.** Every step happens on-chain from public wallets, so anyone can check the receipts. Holders can also spend the token at checkout for 10% off. That is the whole program. It is a loyalty and community mechanism funded from the store's revenue; it is not equity, it is not offered as an investment, and it makes no promises about price, yield, or return.

## The token

|                  |                                                                                                                                          |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| Name / ticker    | GREENPOINT / \$WEEDSEED                                                                                                                  |
| Network          | Solana (SPL token, 9 decimals)                                                                                                           |
| Mint address     | EnYJU3UV7buAZV8SimWtKG4UwfJVZZwhHxhzCB2411G5                                                                                             |
| Supply           | 575,000,000 — fixed. Mint authority revoked: no new tokens can ever be created.                                                          |
| Trading since    | Late 2024, Raydium (WEEDSEED/SOL)                                                                                                        |
| Main pool        | A4SZ8RB993YTZ2QeCiNowGqZMG4thmsXT4AGRhJ8g8aE                                                                                             |
| Program treasury | EcYdKuVFREPMuMG4c3pTMCz7Nx5tJfonvfrN3vjnedx (funded by the company; the engine spends from here)                                         |
| Company wallet   | 9ZPoXbQs6W6vNKJozuDXR7t2h8YnBdh7icS2KSk3SeKj (receives the company's own holder share and the excluded-share remainder, see Disclosures) |

## How the rewards program works

- 1. A sale clears.** Any order paid by any method (card, Cash App, crypto) counts. The store reports the order to the program ledger the moment it is paid, and the ledger records ten percent of the order total as owed to holders. Refunds are not deducted; that difference is in the holders' favor.
- 2. The engine buys the token.** The program treasury holds cash (USDC) that the company deposits. When the owed amount reaches a small threshold, the engine spends it buying \$WEEDSEED on the open market through Solana's DEX routing at the best available price — or pays from tokens the treasury already holds. Each round is small (a few dollars to a few tens of dollars), so buying happens continuously rather than in lumps.

**3. Holders are paid, pro-rata.** The tokens bought in a round are sent to every eligible wallet in proportion to its balance at that moment. Network fees are taken off the top of the round (a few cents). Payment is in \$WEEDSEED, straight to your wallet — nothing to claim.

**4. It never loses count.** If the treasury is empty, the ledger keeps accruing and the engine simply waits; the moment funds arrive it resumes exactly where it left off. Rounds are crash-safe and can never pay the same order twice.

## Who is eligible

- Any wallet holding \$WEEDSEED worth at least \$1 at the time of a round.
- The wallet must have shown activity in the previous 365 days (received or moved tokens). Dormant wallets are skipped until they move.
- Liquidity pools, program vaults, exchange and bot addresses are excluded, as are any wallets blocked by the operator.
- Shares that would have gone to excluded, dormant or blocked balances are redirected to the company wallet (see Disclosures).

## Spend it at the store

Build a cart at [greenpointseeds.com](https://greenpointseeds.com), choose \$WEEDSEED as the payment method at checkout, and 10% comes off the cart total after any coupons. That purchase is itself a store sale, so it feeds the next reward round.

## Liquidity

The main market is a Raydium standard pool pairing \$WEEDSEED with SOL (address above). Roughly 96% of that pool's LP tokens were burned at launch, and additional liquidity added by the company in August 2026 was locked the same way — burned LP tokens can never be withdrawn, by anyone. Liquidity in this market is thin; see Disclosures.

## Transparency — check it yourself

- Every reward round is a set of on-chain transfers from the program treasury. Open the treasury address on any Solana explorer and read the receipts.
- The company posts periodic reconciliations showing store sales, the ten percent, and what was paid out, so the two sides can be compared.
- The live page at [greenpointseeds.com/coin](https://greenpointseeds.com/coin) shows current price and pool data, and links to the public wallets and the chart.
- Before you trade, verify the full mint address character by character. Copies can use the same ticker in minutes; they cannot use the same address.

## Disclosures — read before you hold or trade

- **Insider holdings.** The founding family holds approximately half of the eligible supply (the founder roughly 28%, two family members roughly 22% combined). These wallets receive rewards pro-rata like any other

holder, and the company wallet also receives the redirected shares of excluded balances. This means a majority of each round currently goes to insider wallets.

- **Thin market.** The program's own purchases are currently most of the trading volume. Prices in a market this thin move sharply on small trades, in both directions.
- **Discretionary program.** The reward rate, eligibility rules, and the program itself can be changed, paused, or ended by the company at any time. It is a marketing and loyalty program funded from revenue — not a contract, not a debt, and not a promise of future payments.
- **No rights in the company.** \$WEEDSEED confers no ownership, profit share, voting or other rights in Greenpoint Seeds or Gualdi LLC. It is not intended as an investment, and nothing in this document is investment, legal or tax advice.
- **No promises.** The company makes no statement about the token's price, yield, or future value. The token can go to zero.
- **Taxes.** Rewards may be taxable where you live. You are responsible for your own reporting.
- **Eligibility limits.** The program is not offered where it would be unlawful, and wallets may be screened and excluded at the operator's discretion.

## Program history

- 2024–mid 2026: rewards paid in USDC to holders on a daily schedule.
- August 2026: the ten percent was routed into locked liquidity instead of payouts, by community vote.
- September 2026 (current): holders asked for payouts back. Rewards are now paid in \$WEEDSEED, bought on the open market, round by round as orders land.
